Pine pellets

Premium

Top quality pure pine pellets, without chemical additives or contaminants. Manufactured from a selection of wood sawdust. The product meets stringent standards and is ENplus® A1 certified.

Captain Pellet Premium is an ideal solution for users, for which purchasing certified fuel that meets the highest quality standards, with the best performance parameters, is a priority.

Captain Pellet Premium is a product made exclusively from sawdust from debarked pine wood, with no glues, binders or other chemicals added. Premium pine pellets are designed for heating houses, residential premises and production plants. This eco-friendly fuel is an excellent alternative to coal, gas and eco-pea coal. It can be used in pellet boilers, pellet cookers and fireplaces. It has a high calorific value – more than 18,26 MJ/kg – and a low ash content – less than 0.5%. The 6 mm diameter pellets have a low moisture content: no more than 5,3%.

ENplus® Certificate

Wood pellets are classified as a renewable fuel. They are a clean and environmentally friendly fuel used for heating buildings.

PL 338

Striving for the highest quality of products offered to our customers, we would like to inform you that we have been awarded with the ENplus® PL 338 A1 PL 338 certificate. Developed by the European Biomass Association in cooperation with the European Pellet Council (EPC) – ENplus® is a pan-European quality standard for wood pellets.

Although this system is voluntary, it has become, along with DINplus certification, a common standard for this type of fuel, required by boiler manufacturers, pellet distributors, retail networks and the power sector.

ENplus® standard is based on control of the pellet supply chain – from the production stage to the final product. Acquiring ENplus® certificate allows us to provide our customers with the superior products, the quality of which is confirmed by independent auditors and laboratories.
